

# Biogt Auto Dosing Unit - ADU9000

## SPESIFIKASI

Optional:

- 1) Metal Cabinet
- 2) Biogt Dispersant (Enzymes)

### 24 Hour Clock

### Battery Operation

### 1ml Increment Dose Control

### Bright Red LED Display

### Low Power Consumption

### Low Battery Warning Lamp

### Remote Battery Warning Lamp

### 200 Series pump

### IP55 protection low

Simple to set and easy to use. Simply select 0- 999 doses per day and unit will dose regularly.

Use in any location, regardless of available power supply.

Set your dose volume (in millilitres) from 0 - 9999ml. Once programmed the unit will ensure reliable and consistent dosing, at up to 4 different times, on a daily basis.

Ensures excellent visibility for the user, even in restricted areas with poor light levels.

Unit will give 3 years\* life on a standard LDS3-B 4xD cel battery back. (\* battery life based on a dose duration of 5 minutes per day)

Warns the user to change the battery pack when necessary - avoids any risk of the unit not dosing due to a flat battery.

As an option, the battery warning lamp can be removed from the case and mounted on an extended lead. This gives the user the ability to mount the LDS3-B4/24 in a restricted or hard to access area, yet still be able to monitor battery life. Please note that fitting the remote battery warning lamp and lead removes the IP55 rating from the unit and it is suggested not to use in harsh environments.

our tried and tested 200 series pump head. Proven reliability and simple pump head replacement or tube change. Spares are readily available.

For harsh operating environments it is recommended not to utilize the optional remote low battery lamp - the IP55 case on the standard unit is designed to resist water and dust ingress.
